

Boldlabs Clinic WhatsApp Automation Landing Page

Complete pre-Meta-ads change list — copy, structure, conversion, trust, compliance, tracking and QA

Primary goal: turn cold Meta traffic into qualified clinic conversations and paying customers — not simply page views or form fills.

1. Executive Direction

- **Change the page from feature-heavy SaaS messaging to outcome-driven clinic acquisition.**
- Primary positioning: **AI WhatsApp Receptionist for Clinics.**
- Primary business outcome: **turn WhatsApp enquiries into confirmed appointments, 24/7.**
- Primary CTA everywhere: **Try the AI Receptionist Live →.**
- Secondary CTA: **WhatsApp Us.**
- Keep the **■2,499/month** offer, 48-hour setup, done-for-you setup and cancel-anytime message, but stop repeating them in every section.

2. P0 — Must Change Before Running Ads

Area	Required change
Hero	Rewrite around appointment outcomes, not AI technology.
Claims	Remove or substantiate absolute/quantitative claims such as 8.9x ROI, 100% missed-call recovery, 100% ban-safe, zero lost enquiries, <3% no-shows and guaranteed positive ROI.
Reviews	Replace “5-Star Google Maps Review Collection” with “Automated Google Review Requests.”
CTA	Make the live WhatsApp demo the single dominant conversion action.
Mobile	Add a fixed bottom CTA on mobile: “ ■2,499/mo · Try Live Demo”.
Proof	Turn the Mind Body Recovery testimonial into a proper case study with measurable evidence.
Safety	Make human handoff, no diagnosis/prescription and clinical-question escalation visually prominent.
Tracking	Track Meta → landing page → demo click → WhatsApp conversation → qualified lead → booked demo → paid customer.

3. Recommended Full Page Structure

01 — Hero

AI WhatsApp Receptionist for Clinics

Turn WhatsApp Enquiries Into Confirmed Appointments — 24/7

Your patients get an instant response, available appointment slots and automatic reminders — even when your receptionist is busy or your clinic is closed.

✓ 3-second replies · ✓ Appointment booking · ✓ 24/7 availability · ✓ Human handoff

■2,499/month · Zero setup fee · Live in 48 hours · Cancel anytime

CTA: Try the AI Receptionist Live →

Microcopy: Test it with your own WhatsApp. No credit card required.

02 — Pain

Headline: “How many patients are you losing without realizing it?”

Three pain cards: Busy hours / After-hours enquiries / Forgotten appointments.

Transition: “Your clinic doesn’t need more messages. It needs more conversations that end in appointments.”

03 — Outcome

Headline: “From First Message → Confirmed Appointment”

Show: Enquiry → Instant answer → Qualification → Slot selection → Booking → Reminder → Visit.

Use a real WhatsApp conversation, not a generic AI illustration.

04 — Live Demo

Headline: “Don’t take our word for it. Try it.”

Form: Clinic name + WhatsApp number. Collect city later unless needed.

CTA: Test My AI Receptionist →

Add QR code for desktop visitors.

05 — Case Study

Mind Body Recovery case study. Show only verified metrics. Suggested format: Before → Workflow → After → Doctor quote.

Do not publish metrics unless you can support them.

06 — Workflow

Explain six jobs: instant replies, qualification, booking, reminders, follow-up, human handoff. Organize around patient journey rather than a long feature list.

07 — Safety & Boundaries

No diagnosis. No prescriptions. Clinical questions go to staff. Staff can take over. Consent-first messaging. Collect only necessary information.

08 — Dashboard

Large CRM screenshot with leads, conversations, bookings, upcoming appointments and staff inbox. Explain what the clinic owner can actually see.

09 — Pricing

■2,499/month. Zero setup fee. Done-for-you setup. 48-hour launch target. Cancel anytime. Include only features actually included.

10 — ROI

Interactive calculator: consultation value × additional appointments = potential additional revenue. Label as potential/illustrative, not guaranteed ROI.

11 — Setup

01 Share clinic details → 02 We build workflow → 03 Connect calendar → 04 Test → 05 Go live → 06 Support.

12 — Clinic Types

Dental, physiotherapy, dermatology/skin, aesthetic, multi-specialty and other appointment-based clinics. Avoid implying clinical suitability where the workflow cannot support it.

13 — Objections

Already have receptionist? / Patients speak Tamil or Tanglish? / What if AI is wrong? / Need existing WhatsApp setup? / Low WhatsApp volume? / What happens to medical questions?

14 — FAQ

Answer setup, pricing, WhatsApp infrastructure, data handling, human handoff, cancellation, calendar, reminders and support using exact current product capabilities.

15 — Final CTA

“Your next patient could be messaging right now.”

“Try the AI Receptionist Live →”

■2,499/month · No setup fee · Cancel anytime.

4. Exact Copy Direction for Key Sections

Hero

AI WhatsApp Receptionist for Clinics

Turn WhatsApp Enquiries Into Confirmed Appointments — 24/7

Your patients get an instant response, available appointment slots and automatic reminders — even when your receptionist is busy or your clinic is closed.

Pain

How many patients are you losing without realizing it?

Patients message while staff are busy. Patients message after hours. Patients forget appointments. The system handles repetitive front-desk conversations so your team can focus on patients in the clinic.

Outcome

Don't just answer enquiries. Convert them into appointments.

Patient asks for availability → AI shows real slots → patient chooses → appointment is confirmed → reminders are sent automatically.

Safety

AI handles the front desk. Your team handles the patient.

The system is for front-desk workflows. It should not diagnose, prescribe or make clinical decisions. Escalate medical questions and conversations that require a human.

Final CTA

Your next patient could be messaging right now.

Give every WhatsApp enquiry an immediate response and a clear path to booking.

Try the AI Receptionist Live →

5. Claims to Remove, Soften or Prove

Current type of claim	Action
8.9x ROI	Remove unless supported by a clearly documented methodology, sample and time period.
100% Ban-Safe	Replace with accurate wording describing the actual WhatsApp/Meta infrastructure used.
100% Missed-Call Recovery	Use “Automatically follows up with missed callers” if that accurately describes the workflow.
Zero Lost Inquiries	Use “Helps capture and follow up with enquiries” unless zero-loss can genuinely be measured.
<3% patient no-shows	Use “Automated reminders designed to reduce missed appointments” unless the <3% result is supported.
Up to 38% recovery	Explain the sample and calculation or remove.
Guaranteed Positive ROI	Remove. Use an illustrative ROI calculator instead.
5-star review collection	Replace with “Automated Google Review Requests.”

Unlimited messaging	Only state this if your actual provider/account plan and product terms support it.
3-minute connection / 48-hour setup	State as an actual service target only if your operations consistently support it.

6. Visual / UX Changes

- Hero: use a realistic WhatsApp conversation showing an enquiry becoming a confirmed appointment.
- Use real product screenshots wherever possible: WhatsApp, calendar, CRM, appointment confirmation and reminders.
- Do not use generic robot/AI imagery as the primary proof of the product.
- Use one visual language throughout: clean healthcare + WhatsApp, premium but not over-designed.
- Keep paragraphs short. Use 1 idea per section.
- Every major section should have one obvious CTA or a clear progression to the next step.
- Use social proof close to the CTA, not buried at the bottom.
- On mobile, keep the primary CTA visible without forcing long scrolling.
- Compress images and use WebP/AVIF where practical; lazy-load below-the-fold media.
- Do not let animations delay the first meaningful content or CTA.

7. CTA & Funnel Rules

- Primary CTA text: **Try the AI Receptionist Live** →.
- Secondary CTA: **WhatsApp Us**.
- Do not use 5–7 different CTA labels for the same action.
- Hero CTA, live-demo section, pricing CTA and final CTA should lead to the same conversion path.
- Track clicks separately from completed demo submissions.
- After demo submission, show a clear confirmation and next step.
- Capture UTM parameters so you know which ad/creative produced each qualified lead.
- Use a Meta Pixel + Conversions API setup where technically appropriate, with correct consent/privacy handling.
- Do not optimize only for landing-page views. Progress toward qualified conversations and paid conversions.

8. Meta Ad → Landing Page Message Match

Ad angle A — missed enquiries: “Stop losing patients to unanswered WhatsApp messages.” Landing page hero should immediately talk about instant replies and appointment conversion.

Ad angle B — receptionist: “Give your clinic a 24/7 WhatsApp receptionist.” Landing page should immediately explain what the receptionist does.

Ad angle C — reminders: “Booked patients shouldn’t disappear.” Landing page should lead with automated reminders and follow-up.

Create separate variants only if you can measure them. Keep the core offer and proof consistent.

9. Analytics & Conversion Events

- page_view
- hero_cta_click
- live_demo_start
- demo_form_start
- demo_form_submit
- whatsapp_open
- whatsapp_message_sent where technically measurable

- qualified_clinic_lead
- booked_demo
- trial_started
- subscription_started
- subscription_value

10. Technical QA Before Launch

- HTTPS and valid SSL.
- Mobile layout tested on iPhone and Android widths.
- CTA buttons work in Safari/Chrome.
- WhatsApp deep links open correctly on mobile and desktop fallback is clear.
- Form validation and error states tested.
- Thank-you/confirmation state tested.
- Meta Pixel events fire once, not multiple times.
- UTM parameters persist through the lead flow.
- Canonical URL is correct.
- Robots.txt does not block the landing page.
- XML sitemap includes the intended indexable URL if the page is intended to rank.
- Page has a unique title and meta description.
- Open Graph image/title/description are correct.
- One clear H1; logical H2/H3 hierarchy.
- Images have descriptive alt text where appropriate.
- Fonts and third-party scripts do not cause layout shift.
- Core Web Vitals checked on mobile.
- Cookie/privacy/consent implementation matches the tools and jurisdictions you serve.
- Form and CRM data handling documented.
- 404/error states and redirect behavior tested.

11. Trust & Proof Checklist

- Real clinic logo only with permission.
- Real testimonial only with permission.
- Real metrics only when the measurement method is known.
- Add testimonial date or timeframe when useful.
- Explain what “+20 bookings/month” actually means if retained.
- Show product screenshots that match the live product.
- Explain human handoff.
- Explain what the AI does not do.
- Make pricing transparent.
- Show support/setup responsibility clearly.

■ Add privacy/contact/business identity information.

12. A/B Test Plan After Launch

Test	Variant
Hero A	Turn WhatsApp Enquiries Into Confirmed Appointments — 24/7
Hero B	Give Your Clinic a 24/7 WhatsApp Receptionist
Hero C	Stop Losing Patients to Unanswered WhatsApp Messages
CTA A	Try the AI Receptionist Live →
CTA B	Test It on WhatsApp →
Proof A	Mind Body Recovery case study near top
Proof B	Live product demo near top
Offer A	■2,499/month
Offer B	■2,499/month + Done-for-you setup

Do not change many variables at once. Establish a baseline first, then test one major variable at a time where traffic volume allows.

13. Recommended Final Page Flow — One-Line Blueprint

Ad promise → outcome hero → pain → patient journey → live demo → real clinic proof → workflow → safety → product dashboard → pricing → ROI → 48-hour setup → clinic types → objections → FAQ → final CTA.

14. Launch Gate

- Every numerical claim is evidenced or removed.
- Every WhatsApp/Meta capability is technically verified.
- No medical diagnosis/prescription messaging is implied.
- Primary CTA is obvious above the fold.
- Live demo works end-to-end.
- Mobile sticky CTA works.
- Case study is permissioned and measurable.
- Meta tracking and UTM attribution are tested.
- Page speed is acceptable on mobile.
- Privacy/contact/business information is visible.
- Thank-you flow and sales follow-up are ready before ads go live.

Bottom line: The page should make a clinic owner understand within seconds: “This is a 24/7 WhatsApp receptionist that can handle repetitive enquiries, help patients book, send reminders, and hand over to my staff — for ■2,499/month.” Everything else should support that decision.

Prepared as a developer-ready landing-page change specification. Verify all product, WhatsApp, privacy and performance claims against the live implementation before publishing.
